CPS ENERGY
Quarterly STEP Report to the
CITY OF SAN ANTONIO

4th QUARTER
FOR CPS ENERGY FISCAL YEAR 2023

Prepared May 2023

Executive Summary

Ordinance 2009-05-21-0399 authorized the funding of CPS Energy's energy efficiency and conservation program, known as the Save for Tomorrow Energy Plan. For the purposes of this report, the Save for Tomorrow Energy Plan will be referenced as original STEP. The original STEP program was designed as a demand management program to encourage customers to improve the energy efficiency of their homes, buildings and processes, thereby saving electricity and reducing system demand. The program was initiated to avoid 771 megawatts (MW) of demand growth between 2009 and 2020. The 771 MW is equivalent to the capacity of a large power plant. To put this into perspective, the CPS Energy Spruce 1 power plant has a generation capacity of 575 MW, and Spruce 2 has a generation capacity of 750 MW.

CPS Energy successfully achieved its original STEP goal a year early and under budget, ultimately saving 845 MW. To build on the success of the program, City Council approved ordinance 2020-01-30-0063 creating a one-year extension (STEP Bridge) allowing CPS Energy to achieve an estimated 75 MW of additional demand reduction at a cost of $70 million.

The COVID-19 pandemic in 2020 impacted community engagement and customer participation in STEP Bridge. To further support the initiative, City Council approved extending the program through July 2022, allowing up to an additional 75 MW of demand reduction at a cost of $70 million.

Ordinance 2022-06-16-0435 authorized the funding of the new CPS Energy conservation and sustainability initiative the Sustainable Tomorrow Energy Plan (STEP), which aims to reduce community demand by 410 MW, achieve 1% energy savings per year, weatherize 16,000 homes, and contribute to 1.85 million tons of avoided carbon over 5 years through equitable programs designed to help customers save energy and money.

This quarterly report is a part of the accountability procedures established to assist City staff in evaluating the STEP program.

Program Expectations

The demand side management programs in the STEP programs enable customers who participate directly in the program to lower their utility bills almost immediately. Those customers who do not directly participate still benefit in the short run because lower system usage reduces overall system costs and produces fuel savings to all customers. All customers benefit in the long term as CPS Energy is able to postpone the need for building additional generation capacity and raising utility rates to finance the construction of new generation.

Another program expectation exhibited in the City Ordinance is the STEP Funding Accountability Procedures CPS Energy must follow. The procedures are listed below:

- All funds collected for STEP programs, either from base rates or through the fuel adjustment, must be accounted for separately.
- CPS Energy shall provide an annual report, prepared by an independent third-party consultant, to the City which quantifies the kilowatt savings from STEP expenditures by customer class and other measures deemed necessary by the City.
- Based on the report provided and the amount of STEP expenditures determined to be eligible for recovery through the fuel adjustment, CPS Energy will calculate the annual per kilowatt hour charge. The report will be reviewed and approved by City staff before implementation of the per kilowatt hour charge.
- City staff will monitor the recovery through the fuel adjustment on a monthly basis. Annually, the amount of under or over recovery, if any, will be determined and the fuel adjustment will be adjusted accordingly to ensure that only the amount of eligible STEP expenditures are recovered.
- CPS Energy must maintain documentation of all STEP expenditures, by customer class and other measures deemed necessary by the City.
- CPS Energy shall provide quarterly reports to the City staff which show year to date STEP expenditures by program and customer class, funds accumulated and estimated kilowatt savings, and other measures deemed necessary by the City.
- Examples of detailed quarterly report information include but are not limited to the following: number of kilowatts saved by customer class and program type; the number of participants and contractors; geographic area and council district program activity; and total costs/expenditures by program type.
- CPS Energy shall provide an annual report to the City which shows the incentive payments made as a result of the Commercial Demand Response program for the prior 12 months and other measures deemed necessary by the City.
- A quarterly report detailing information shall be made available to the public with sufficient protection regarding confidential information as deemed necessary by the City.

Funding Recovery

The total cost of the original STEP Program during the 2009 to 2020 time period was $723 million with an annual cost ranging from $12.3 million to $111 million, of which approximately $9 million annually is recovered in base rates. The remaining annual amount is recovered through an adjustment in the fuel surcharge. The cost recovery begins the following fiscal year and is subject to third party review and verification of incremental kilowatt reduction. Customers can offset the additional costs of these fuel surcharges by implementing some of the STEP energy efficiency measures. In FY22, the original STEP program cost was $58.3 million.

The CPS Energy fiscal year runs from February 1 through January 31, and the fiscal year is denoted by the year in which the fiscal year ends. For example, CPS Energy FY 2023 would be the period from February 1, 2022 through January 31, 2023.

Following is a synopsis of STEP recovery to date and the recoverable amounts for the recovery that started in July of 2022 for Fiscal Year 2022:

Table 1:

Fiscal Year	Target Recovery	Actual Recovery	Cumulative Over/(Under)
2009	$3,489,514	$4,060,315	$570,801
2010	$12,222,745	$13,942,711	$2,290,767
2011	$19,588,918	$19,907,374	$2,609,223
2012	$30,697,067	$27,495,601	$(592,243)
2013	$50,534,910	$51,158,184	$31,031
2014	$55,407,519	$54,838,828	$(537,660)
2015	$58,425,176	$57,212,156	$(1,750,680)
2016	$62,883,664	$65,273,384	$639,040
2017	$102,210,184	$104,133,945	$2,562,801
2018	$80,735,314	$78,917,724	$744,624
2019	$69,123,763	$68,268,607	$(110,532)
2020	$72,815,072	$74,337,766	$1,412,162
2021	$48,192,727	$46,551,304	($228,805)
2022	$49,264,892	TBD(Jul22-Jun23)	TBD

For the calculations of the adjustments to the fuel surcharge listed below, a majority of the under recovery was taken into account, and the remaining amounts will be taken into account when the FY 2022 fuel surcharge adjustment is calculated.

FY	Incremental STEP Cost	Recovery Period	Residential Impact per 1000 kWh STEP
2009	$3.5M	Jul09-Jul10	$0.21
2010	$11.7M	Aug10-Jul11	$0.77
2011	$17.4M	Aug11-Jul12	$1.09
2012	$28.2M	Aug12-Jun13	$1.74
2013	$50.8M	Jul13-Jun14	$2.78
2014	$55.0M	Jul14-Jun15	$3.00
2015	$58.4M	Jul15-Jun16	$3.10
2016	$64.7M	Jul16-Jun17	$3.47
2017	$101.6M	Jul17-Jun18	$5.41
2018	$79.0M	Jul18-Jun19	$4.14
2019	$68.4M	Jul19-Jun20	$3.53
2020	$73.2M	Jul20-Jun21	$3.84
2021	$45.9M	Jul21-Jun22	$2.30
2022	$49.3M	Jul22-Jun23	$2.38

As noted in the table above, a new STEP recovery factor was implemented in July 2022, with recovery going through June 2023. This recovery factor was based on the CPS Energy FY2022 STEP expenditures of $58,289,580. Removing the base rate recovery, the recoverable amount for FY2022 was $ 49,264,892.

Summary of Residential Programs

HVAC Program – offers incentives for the purchase of eligible high efficiency central air conditioners, heat pumps and room air conditioners. Under the current STEP program, we added High-Performance A/C Tune-ups, which is a free comprehensive check of HVAC equipment to help identify ways to improve existing central air conditioner or heat pump efficiency, performance, and maintenance.

Home Efficiency Program – targets a wide range of energy efficiency measures that save cooling and heating energy in existing homes.

Smart Thermostat Program – offers a residential air-conditioner demand response control program, where CPS Energy installs a free Honeywell programmable thermostat in participating customers' homes when they enroll in the program. CPS Energy uses the thermostat to cycle off the compressor of participating air conditioners during periods of peak demand throughout the summer (June – September).

Bring Your Own Thermostat (BYOT) Program – offers incentives for a residential air-conditioner demand response control program, where a customer selects a programmable thermostat that actually learns their temperature preferences to program itself and automatically adjust to an energy efficient temperature when they're away. CPS Energy has teamed up with Nest, Honeywell, Resideo and Energy Hub to offer customers these thermostats.

Nest Direct Install Program – offers former Home Manager customers the option to replace their older generation devices with a free installed Nest programmable thermostat.

Solar Photovoltaic Rebates – offers incentives for the installation of both solar photovoltaic systems.

New Residential Construction – offers incentives to developers to build new homes at least 15% more energy efficient than required by the current CoSA building code.

Cool Roof – offers incentives to homeowners to install qualified Energy Star Certified roofing products, which reduce the energy required to cool a home by reflecting solar energy, lowering roof surface temperatures. Under the current STEP program, the Cool Roof program is now a measure integrated into the Home Efficiency program.

Retail Channel Partnerships – offers point of purchase incentives on ENERGY STAR lighting and room air conditioners at participating retailers. Under the New STEP this program has been redesigned and rebranded to Retail lighting discounts. Retail lighting discounts- is designed to reach low-to-moderate income customers through retail locations in their neighborhoods by offering in-store rebates for ENERGY STAR certified lighting.

Home Energy Assessments – offers a free in-person assessment helping customers identify energy saving opportunities in their home, which may also include LED lighting and a WiFi programmable thermostat directly installed during the home visit.

Energy Savings Through Schools – incorporates energy efficiency into the 6th grade classroom by equipping teachers, students and parents with in-class curriculum and take-home kits full of energy efficient products.

Weatherization – offers an assistance program designed to help families in need reduce their monthly utility bills. Eligible participants, whether they are homeowners or renters, may receive free weatherization upgrades designed to increase the energy efficiency of their homes.

FlexEV Smart Rewards – customers can receive a one-time credit of $250, in addition to monthly credits of $5, on their utility bill for allowing CPS Energy to make remote adjustments to their level 2 WiFi charger when the demand for energy is high.

FlexEV Off-Peak Rewards – customers can receive a one-time credit of $125, in addition to monthly credits of $10, on their utility bill for agreeing to charge during off-peak hours.

Summary of Commercial Programs

Solar Photovoltaic Rebates – offers incentives for the installation of both solar photovoltaic systems.

C&I Solutions – offers an energy assessment program focused on helping business customers identify opportunities and rebate offerings for energy efficiency measures including lighting, HVAC, and refrigeration.

Schools and Institutions – offers contractor led incentives, which focus on helping schools and government agencies reduce energy use through benchmarking, technical assistance, energy master planning workshops, and rebate offerings for energy efficiency measures.

Small Business Solutions – offers contractor led incentives for energy efficiency measures for small business customers with less than 100 kW demand.

Whole Building Optimization – offers contractor led incentives for building optimization, which include tools and strategies to enhance a facility's operational efficiency.

C&I Demand Response – incentivizes commercial & industrial customers to reduce energy use during times of peak summer demand. Demand response customers take steps to lower their facilities' energy demand for a 1 to 3-hour curtailment period. The performance is evaluated, and incentives are tied to the customers' ability to reduce demand.

CPS Energy FY 2023 4th Quarter STEP Report

Attachment A illustrates the kW reduction and dollars expended for the various residential energy efficiency and demand response programs. The data are presented for the 4th quarter only. Since the fiscal year for CPS Energy runs from February 1 to January 31, the 4th quarter covers November 1, 2022 through January 31, 2023.

Attachment B illustrates the kW reduction and dollars expended for the various commercial efficiency and demand response programs. The data are presented for the 4th quarter only. Since the fiscal year for CPS Energy runs from February 1 to January 31, the 4th quarter covers November 1, 2022 through January 31, 2023.

Attachment C shows the 4th quarter residential rebate dollars broken down by City Council District. The table shows the numerical data, and the charts are a graphical representation of the numerical data. The weatherization program dollars included solely represent the cost of the measures installed. This attachment does not include Smart Thermostat, Nest Direct Install, or BYOT installations, as these are demand response programs and not energy efficiency per se, nor does it include New Home Construction installations, Energy Savings Through Schools or Retail Channel Partnership purchases, as these rebates cannot be attributed to individual customer accounts.

Attachment D shows the 4th quarter commercial rebate dollars broken down by City Council District. The table shows the numerical data, and the charts are a graphical representation of the numerical data. This attachment does not include Commercial & Industrial Demand Response programs, as these are demand response programs and not energy efficiency per se.

Attachment E shows the 4th quarter number of residential rebates broken down by City Council District. The table shows the numerical values, and the charts are a graphical representation of the numerical data. This attachment does not include Smart Thermostat, Nest Direct Install, or BYOT installations, as these are demand response programs and not energy efficiency per se, nor does it include New Home Construction installations, Energy Savings Through Schools or Retail Channel Partnership purchases as these rebates cannot be attributed to individual customer accounts.

Attachment F shows the 4th quarter number of commercial rebates broken down by City Council District. The table shows the numerical values, and the charts are a graphical representation of the numerical data. This attachment does not include Commercial & Industrial Demand Response programs, as these are demand response programs and not energy efficiency per se.

Attachment G shows the cumulative residential rebate dollars broken down by City Council District. The table shows the numerical data, and the charts are a graphical representation of the numerical data. The weatherization program dollars included solely represent the cost of the measures installed. This attachment does not include Smart Thermostat, Nest Direct Install, or BYOT installations, as these are demand response programs and not energy efficiency per se, nor does it include New Home Construction installations, Energy Savings Through Schools or Retail Channel Partnership purchases as these rebates cannot be attributed to individual customer accounts.

Attachment H shows the cumulative commercial rebate dollars broken down by City Council District. The table shows the numerical data, and the charts are a graphical representation of the numerical data. This attachment does not include Commercial & Industrial Demand Response programs, as these are demand response programs and not energy efficiency per se.

Attachment I shows the cumulative number of residential rebates broken down by City Council District. The table shows the numerical values, and the charts are a graphical representation of the numerical data. This attachment does not include Smart Thermostat, Nest Direct Install, or BYOT installations, as these are demand response programs and not energy efficiency per se, nor does it include New Home Construction installations, Energy Savings Through Schools or Retail Channel Partnership purchases as these rebates cannot be attributed to individual customer accounts.

Attachment J shows the cumulative number of commercial rebates broken down by City Council District. The table shows the numerical values, and the charts are a graphical representation of the numerical data. This attachment does not include Commercial & Industrial Demand Response programs, as these are demand response programs and not energy efficiency per se.

Attachment K illustrates the cumulative residential rebate locations overlaid on a map of Bexar County and the City Council Districts. This attachment does not include Smart Thermostat, Nest Direct Install, or BYOT installations, as these are demand response programs and not energy efficiency per se, nor does it include New Home Construction installations, Energy Savings Through Schools or Retail Channel Partnership purchases as these rebates cannot be attributed to individual customer accounts.

Attachment L illustrates the cumulative commercial rebate locations overlaid on a map of Bexar County and the City Council Districts. This attachment does not include Commercial & Industrial Demand Response programs, as these are demand response programs and not energy efficiency per se.

Attachment M illustrates the cumulative residential rebate locations overlaid on the various census tract income segments. This attachment does not include Smart Thermostat, Nest Direct Install, or BYOT installations, as these are demand response programs and not energy efficiency per se, nor does it include New Home Construction installations, Energy Savings Through Schools or Retail Channel Partnership purchases as these rebates cannot be attributed to individual customer accounts.

Attachment N illustrates the cumulative commercial rebate locations overlaid on the various census tract income segments. This attachment does not include Commercial & Industrial Demand Response programs, as these are demand response programs and not energy efficiency per se.
